

PRODUCT DATA SHEET

The Model 2000 Time Code Generator generates the General Timing Time Code at a 2KHz rate. An LED display indicates the present time code, hold and sign status. Front Panel controls allow the operator to enter a preset time, load this value into the time code generator and to run or hold the time code generator. The LED display is also used to view the preset time.

Specifications:

OUTPUT 2 Khz General Timing Time Code
